

April 17, 2018

To Providers transitioning to Vesta® EVV,

The Texas Health and Human Services Commission (HHSC) released an official notice on March 22, 2018 stating that its contract with MEDsys will not be renewed on November 6, 2018. DataLogic Software, Inc. has been tasked with implementing a plan to assist providers with the transition to Vesta® EVV to ensure that they remain compliant with EVV requirements.

For the past 23 years, DataLogic has provided software services for Texas Medicaid agencies. During that time, we have gained a great deal of respect for the work that Texas Providers do in delivering much needed assistance for the aged and disabled citizens of Texas.

There have been many challenges for Provider agencies through the years. DataLogic understands the impact this transition will have, and we are committed to minimizing the burdens while making the process as smooth as possible.

Over the past year, DataLogic has doubled our datacenter infrastructure and staffing in preparation for other states that are now mandated to implement EVV by the 21st Century Cures Act. With these investments, DataLogic is prepared to transition all Texas providers to Vesta® EVV over the next few months.

DataLogic has also developed advancements in software features that are being piloted in conjunction with HHSC. These pilots and features include the GPS Mobile App, the Electronic SAD (eSAD) process which eliminates the need for client signatures and the MCO Authorization pilot which provides daily MCO authorization updates directly into the Vesta® EVV system.

Our goal is straightforward: to ensure all Provider agencies complete a successful transition to Vesta® EVV before November 2018. The Vesta® EVV website has links to instruct Provider agencies on how to initiate the transition process, and how to register for Vesta® EVV online training or Vesta® Tour of Texas Regional Workshops. Many Provider agencies have begun the process already.

The Vesta® EVV website is: www.vestaevv.com

If your Provider Agency uses a Third-Party or In-House Software system, DataLogic will provide an interface that allows integration between your system and Vesta® EVV.

DataLogic is fortunate to have a dedicated team with decades of experience in Texas Medicaid and EVV, ready to assist with the transition process. We are all looking forward to the opportunity to work with you and your staff in the coming months.

Respectfully,

Rick Ledesma, President and Chief Executive Officer
